Electronics dominates overall revenue contribution, making it the primary driver of business growth. Monthly trends show fluctuations with noticeable peaks, indicating seasonal demand patterns. Despite strong revenue, return rates remain around ~5.5%, suggesting moderate operational inefficiencies that could impact profitability.

Executive Overview

Senior and adult customer segments contribute the majority of revenue, indicating higher purchasing power among older demographics.

Credit and debit card payments dominate transactions, while low-value customers form the largest base but contribute relatively less revenue.

Higher discounts significantly reduce profit margins, highlighting the need for optimized pricing strategies across categories.

Return rates increase with longer delivery times, suggesting logistics performance directly impacts customer satisfaction and profitability.
